George Stephenson

George Stephenson was a British inventor and engineer. He is (famous) for building the first practical railway locomotive in the world.

Stephenson was born in 1781 in Wylam, near Newcastle upon Tyne, Northumberland. During his youth he worked as a fireman and (late) as an engineer in the coal mines of Newcastle. He invented one of the first miner's safety lamps independently of the British inventor Humphry Davy. Stephenson's early locomotives were used to carry loads in coal mines, and in 1823 he established a factory at Newcastle for their manufacture. In 1829 he designed a locomotive known as the Rocket, which could carry both loads and passengers at a (great) speed than any locomotive constructed at that time. The success of the Rocket was the beginning of the construction of locomotives and the laying of railway lines.

MAN AND THE BIOSPHERE

Interrelations between man and biosphere are of a fairly complex nature. Man, like any other living organism, depends for his life on what the biosphere provides: water oxygen, food, and shelter. On the other hand, the biosphere is strongly affected by all so of human activity.

Technology powerfully amplifies the effects human beings on the atmosphere Prehistoric man withdrew from the atmosphere only the oxygen he required respiration; technological man consumes a far greater amount of oxygen to support fir power plants and chemical processes. The carbon dioxide produced by technology processes in the biosphere substances wholly new to it; man-made radio-isotopes are wide variety of synthetic materials such as plastics, insecticides, herbicides and numeric industrial materials. These, too, also alter the biosphere.

The problem has already been discussed at a large number of conferences, some them sponsored by the UN. However, relatively little has so far been done to environmental pollution.

Today English is the language of the world. It is only in the course of the last hundred years that English has become a world language. In Shakespeare's time it was a «provincial» language of secondary importance with only 6 million native speakers. Nowadays over 300 million people speak it as a mother tongue. English is the official language of the United Kingdom of Great Britain and Northern Ireland, of the United States of America, of Australia and New Zealand. It is used as one of the official languages in Canada, the Republic of South Africa and the Irish Republic. English is also spoken as a second language in the former British and US colonies. In a number of speakers (400 million) it is second only to Chinese. English is the major international language of communication in such areas as science, technology and business. It is the language of literature, education, modern music, and international tourism. English is the major language of diplomacy; it is one of the official languages of the United Nations organization and other political organizations. Russia is integrating into the world community and the problem of learning English for the purpose of communication is especially urgent today. One should say that English is not an easy language to learn. There is a big problem of spelling, of the large number of exceptions to any rule. This language is very idiomatic and the prepositions are terrible. English is one of those languages which may seem easy in the beginning, but then the bridge between basic knowledge and mastery takes a long time to cross. But if you cross this bridge it will give you great satisfaction. You will be able to speak to people from other countries, to read foreign authors in the original, which makes your outlook wider. To know English today is absolutely necessary for every educated man, for every good specialist.

3. Answer the questions:

1. It is easy to learn foreign languages?
2. Which language in the world is spoken by most people?
3. When did you begin learning English?
4. What was the process of learning?
5. Why is English not an easy language to learn?
6. Why is it necessary to learn English?
7. What advantages have the people who know foreign languages?

4. Match the proverbs.

| 4) Industriousness is the mother of good luck. | d) Учиться никогда не поздно. |
| 5) Knowledge is power. | e) Век живи, век учись. |
| 6) All things are difficult before they are easy | f) Знания — сила. |

5. Answer the question using the phrases. Why should I know English?

English must be learnt ... to have a chance to go abroad and get experience in a foreign company to study at a college	The best way to learn English is ... to work hard and thoughtfully to listen attentively to use a dictionary

Studying at Surgut Professional College

I study at Surgut Professional College. It is one of the finest educational institutions in our town. Many Surgut famous people have graduated from my college. Studying at our College gives a solid background in all spheres of knowledge and prepares for practical work. Our college is quite large and old. It was founded in the 20th century. More than 1000 students are currently enrolled. The course of study at my college lasts two-four years. There are many faculties in my college. Here are some of them: the faculty of computing, the faculty of welding, the faculty of machine tools and metalworking and others. Our college is large and we have five buildings. We have one laboratory building which are equipped with up-to-date equipment and there students can carry on lab works and conduct various experiments. There are several cafes at the college in every department. There are also two dormitories where students from other cities live. My profession is a very useful profession because it is socially important. I need some specific education and training to skilled craft level, imagination, accuracy, technical imagination, accuracy and fast reactions. I am glad to study here.

1.1 MY FUTURE PROFESSION

I want to become a specialist in computer technologies — a computer engineer. Computer industry is developing so fast, that it **comprises** almost all spheres of professional life. No business now is possible without computers. This is especially true about **automated manufacturing of products and robotics**. Computer control of automated production opens new **horizons** for the **cheap** and quality production of goods. Information is now **generated, transmitted, received, and stored** electronically through computer networks on a **scale unprecedented in history**, and there is every **indication** that the **explosive** rate of growth in this field will continue. Computer engineering is a general field. It **deals with** both electric and electronic industries. Electronic engineering deals with the research, design, **integration**, and **application of circuits and devices** used in the **transmission** and **processing** of information. Engineers in the field of electric and electronic engineering are concerned with all aspects of electrical communications, from fundamental questions such as «What is information?» to the highly practical, such as the design of telephone systems. In designing communication systems, engineers rely on various branches of advanced mathematics, such as Fourier analysis, linear systems theory, linear algebra, differential equations, and probability theory. Engineers work on control systems which are used **extensively** in automated manufacturing and in robotics. Major developments in the field of communications and control have been the **replacement** of analogue systems with digital systems; **fibre optics** are used now instead of copper cables. Digital systems offer far greater **immunity** to electrical noise. Fibre optics are likewise immune to interference; they also have great **carrying capacity**, and are extremely light and inexpensive to manufacture. Computer engineering is now the most **rapidly growing** field. The electronics of computers is the design and manufacture of memory systems, of central processing units, and of peripheral devices. The most prospective industry now is the Very Large Scale Integration (VLSI) and new computer architectures. The field of computer science is closely related to computer engineering; however, the task of making computers

more «intelligent» (**artificial intelligence**), through creation of sophisticated programs or development of higher level machine languages or other means, is generally regarded as the dream of computer science. One current trend in computer engineering is microminiaturization. Engineers continue to work to fit greater and greater numbers of circuit elements onto smaller and smaller chips. Another trend is towards increasing the speed of computer operations through the use of parallel processors and **superconducting** materials.

3. How do you see your future profession? Please answer the following questions:

- 1) What kind of work are you interested in?
a) well paid b) interesting c) in a large and famous company
d) quiet e) in an industry which has a future f) prestigious
g) not to sit the whole day in the office h) to travel a lot

1.3 THE FUTURE OF THE ENGINEERING PROFESSION

Among various recent trends in the engineering profession computerization is the most widespread. The trend in modern engineering offices is also towards computerization. Computers are increasingly used for solving complex problems as well as for handling, storing, and generating the enormous volume of data modern engineers must work with. Scientific methods of engineering are applied in several fields not connected directly to manufacture and construction. Modern engineering is characterized by the broad application of what is known as systems engineering principles. Engineers in industry work not only with machines but also with people, to determine, for example, how machines can be operated most efficiently by workers. A small change in the location of the controls of a machine or of its position with relation to other machines or equipment, or a change in the muscular movements of the operator, often results in greatly increased production. This type of engineering work is called time-study engineering. A related field of engineering, human-factors engineering, also known as ergonomics, received wide attention in the late 1970s and 1980s when the safety of nuclear reactors was questioned following serious accidents that were caused by operator errors, design failures, and malfunctioning equipment. Human-factors engineering seeks to establish criteria for the efficient, human-centered design of, among other things, the large, complicated control panels that monitor and govern nuclear reactor operations.

2. Answer the questions.

1. What is the most widespread trend in the engineering profession?
2. What are computers used for in modern engineering?
3. What approaches are used in modern engineering?

James Watt

James Watt was a Scottish inventor and mechanical engineer, known for his improvements of the steam engine.

Watt was born on January 19, 1736, in Greenock, Scotland. He worked as a mathematical-instrument maker from the age of nineteen and soon became interested in improving the steam engine which was used at that time to pump out water from mines.

Watt determined the properties of steam, especially the relation of its density to its temperature and pressure, and designed a separate condensing chamber for the steam engine that prevented large losses of steam in the cylinder. Watt's first patent, in 1769, covered this device and other improvements on steam engine.

At that time, Watt was the partner of the inventor John Roebuck, who had financed his researches. In 1775, however, Roebuck's interest was taken over by the manufacturer Matthew Boulton, owner of the Soho Engineering Works at Birmingham, and he and Watt began the manufacture of steam engines. Watt continued his research and patented several other important inventions, including the rotary engine for driving various types of machinery; the double-action engine, in which steam is admitted alternately into both ends of the cylinder; and the steam indicator, which records the steam pressure in the engine. He retired from the firm in 1800 and thereafter devoted himself entirely to research work.

The misconception that Watt was the actual inventor of the steam engine arose from the fundamental nature of his contributions to its development. The centrifugal or flyball governor, which he invented in 1788, and which automatically regulated the speed of an engine, is of particular interest today. It embodies the feedback principle of servomechanism, linking output to input, which is the basic concept of automation. The **watt**, the unit of power, was named in his honor. Watt was a well-known civil engineer. He invented, in 1767, an attachment that adapted telescopes for use in the measurement of distances. Watt died in Heathfield, near Birmingham, in August 1819.

2. Answer the questions

1. Who was James Watt?
2. When did he become interested in improving the steam engine?
3. What properties of steam did Watt determine?
4. What did he design after these determinations?
5. When and where did J.Watt and his partner begin the manufacture of steam engines?
6. Can you name several important Watt's inventions?
7. Was Watt the actual inventor of the steam engine?
8. What is the necessity of the flyball governor invented by Watt in 1788 nowadays?
7. What does "the watt" mean?

3. Circle the correct word in the sentence

1. James Watt was a Scottish / a French inventor and mechanical engineer.
2. At the age of nineteen Watt became interested in improving the vacuume cleaner / the steam engine.
3. Watt determined the relation of the steam weight / density to its temperature and pressure.
4. In 1769 J.Watt worked with the inventor / the traveler J.Roebuck, who had financed his researches.
5. Later James Watt patented his invention of the rotary engine for controlling driving various types of manufacturing / machinery.
6. The flyball governor invented by Watt is automatically regulate the speed of an engine / a telescope.

3. Complete the sentences with one of the verb's "be" forms "was", "were", "is" or "are"

1. Watt a well-known civil engineer.
2. Many of Watt's inventions patented by him.
3. John Roebuck and James Watt good partners.
4. J.Wattborn in 1736 in Scotland.
5. Today the centrifugal or flyball governorthebasic concept of automation.
5. The Scctish peopleproud of their outstanding engineer.

A job of a heating technician

Heating technicians are responsible for installation, maintenance, or repairing home, commercial or industrial heat systems. They can read blueprints and connect wires. Heating technicians know how to take measurements, cut pipes, connect pipes, and weld (сваривать) as needed. Heating technicians also do routine maintenance work for the purpose of keeping heating systems working in an efficient manner. During the spring and summer when the weather is warmer, the heating technician may be called on to replace filters or clean ducts. During the winter months when the weather is colder, heating technicians may do work such as adjusting burners or blowers. If the heat system appears to not be working, they might check the burner nozzle, the controls, or the thermostat to diagnose the problem. Heating technicians are typically trained via apprenticeship programs that lead to trade certification. This career is not easy to prepare for because there are various types of heating, such as gas, electric, oil, and coal. In addition, within heat systems there are pumps, motors, fans, compressors, ducts, thermostats, or various switches. Heating technicians must understand all of these various types of heating and must be able to fix (ремонтировать) any aspect of them. In addition to having heating repair skills, the heating technician has to (должен) have very steady hands. It is often necessary to reach under, over, or around parts of heaters to make the necessary repairs. Good concentration and the ability to work in stressful conditions are also necessary for a heating technician to have.

1. Answer the questions:

1. What must a heating technician know and do?
2. If the heat system doesn't work, what must a heating technician do?
3. What types of heating do you know?
4. How are heating technicians trained?
5. What qualities are necessary for this job?

2. Make questions to the underlined words in the sentence and name the type of the question:

1. Heating technicians must understand all of these various types of heating.

2. **Heating technicians** are responsible for installation, maintenance, or repairing home, commercial or industrial heat systems.
3. Heating technicians also do **routine maintenance work**.
4. Heating technicians are typically trained via **apprenticeship programs**.

A job of a welder

Hello, my name is Alex. I'm seventeen. I want to tell you about my profession. I'm a future welder. Now I'm studying at the college. I'm the second-year student at the Surgut Professional College. I chose this profession because I like working with metals. I even love heavy metal music! I love turning cold, ugly metal into a usefully beautiful part. A welder is someone who welds metals. It's a dangerous profession because you can be blinded by sparks. Welding can also burn your skin and your eyes if you aren't careful. So you must wear protective clothing: overalls, goggles, a mask, a helmet and gloves. You must know safety rules in the workshop or at the plant.

It's a very important profession. Welding is the only way to join two or three pieces of metal and make a single piece. Welders help build different constructions: bridge constructions, house constructions or marine constructions. Welding skills are almost used in every trade. If I'm a welder, I can weld any things: weld pipes, car, ship and plane components, make different metal products or metal frames. We cannot imagine our life without welding. Nearly everything is welded. There are different types of welding: gas welding, electric welding, underwater welding, space welding, and pipe welding. Thus, you can work under water, in space, at construction sites, at plants, at oil rigs. It's a good craft and a well-paid job. There are different welding professions: a welder, a welder technician, a welder instructor, supervisor and etc.

A great number of job positions are waiting for foreign workers from many countries of the world. These professions involve oil rig, metal fabrication, and many construction jobs. The United States of America suggest highly-paying welding jobs for welders working the automobile manufacturing and oil industry.

Answer the questions.

A job of a a motorman

A motorman repairs a ship and must be sure that the motors and the overall machinery work. It's a very important profession. As a **ship motorman**, you would need to:

1. Concentrate on integrity (целостность) of engines and motors, their working, repair and lubrication
2. Ensure that equipment remains in working order. Safety of passengers and the crew depends on it.
3. Look into ordering new machinery or replacing old ones
4. Work on oil rigs and drilling equipment especially since they are high wear motorized devices
5. Ensure complete repair of all equipment at all times (Under guidance(под руководством) of engineers)
6. Maintain proper logs of equipment and their current status
7. Train/help new crew
8. Maintain good two way communication with crew members
9. To keep equipment damage and loss at minimum level
10. Detect and rectify backlog areas in an equipment line with minimum time lag (в короткий срок)
11. Provide assistance to other crew members, in case need be
12. Work in special departments like mechanics, electrical engineering or power generation area of the vessel

Besides these, the overall status of condition of all onboard equipment is a responsibility that lies with a ship's motorman. Knowing about their exact condition, need for repair or replacement or service is something you would need to take care of all the time.

SAFETY ENGINEERING

Accidents to people in industrial enterprises are called industrial traumatism (injury). They occur when workers have not acquired the requisite for skill and lack the necessary experience in handling tools and equipment. Accidents are also caused through neglect of safety rules and regulations in the factories and training workshops.

The purpose of safety engineering is to prevent accidents and to create such conditions of work in industry which will ensure maximum productivity of labour.

When taking up new duties or when first going to work at any industrial enterprise each worker is obliged to acquaint him thoroughly with, and to master the safety instructions.
